

BH Update - Mar 13th

General updates

- RFOs are finished and attached with this update.
- PCBWAY Order is ready to buy

Subtotal(6 Items): **US \$ 155.82**

All Total: **US \$ 155.82**

BH Report

Yesterday I did the following processes for four [4] iPhone 11's:

Disassembly Enclosure:

1. Extra Parts [1-2]
2. Step [1-5]

And I notice many things from the way the things were labeled in the PlazaAirlink to the instructions, even the work stations.

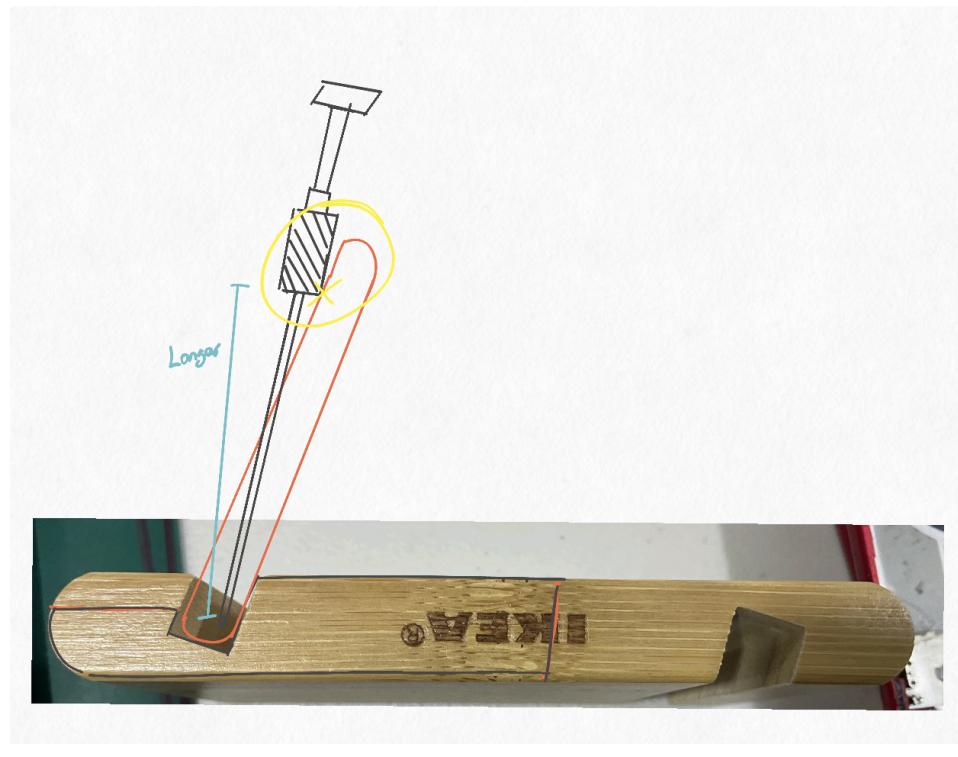

In this report I'll limit myself only fixtures that can be helpful to this process.

#1

The bases for the tablet worked good, the steeper the angle the better I would change 2 things from this design:

- Make 2 cuts
- Make it wider

#2

Fixture, ideally make it to work for all models but might be hard.

Adding points of interest to the jigs with colors and design might prove really helpful.

The old one has this movable part that can change with the models, I would suggest to keep this idea for the design ideally without screws so its hot swappable.
